

SYNTHETIC TURF CLEANING

Clean turf = Safe turf

Odeys Synthetic Turf Cleaning can give new life to your field and make it safer than ever to play on.

Benefits:

- Removes trash and debris from the surface and top layer of infill – protecting and extending the longevity of your valuable investment
- Prevents debris from working deeper into infill which can reduce drainage
- Helps level infill
- Reduces compaction
- Stands up turf fibers
- Improves safety

We can do your project or coach you through it!

SYNTHETIC TURF CLEANING

A peek under the hood

Odeys Synthetic Turf Cleaner utilizes a rotary brush that picks up the top layer of infill and debris.

Debris such as leaves, pine needles, tape, track spikes, soccer cleats, sunflower seeds, gum, cigarette butts, rocks, hair pins, broken-off turf fibers and other debris is sorted out and the clean infill is deposited back onto the synthetic turf. A brush then redistributes and levels the infill into the turf fibers and stands them erect.

Recommended to be done at least twice a year.
